Sponge Boats

Make these fun little boats to sail over the summer.

You'll need:

- sponges
- wooden skewers
- construction paper
- scissors
- glue

Method

- Cut your sponges in half.
- Cut paper into triangles – big ones and little ones for the sails.
- Poke skewer through the paper in two places, and then through the sponge, leaving a little bit poking through the top.
- Dab some glue on to hold in place.
- And now you can set sail!

Tip: when you sail, place the boat into the water and let the sponge absorb water before letting go. You'll need to adjust the skewer up and down through the sponge and adjust the sail for optimal sailing.
