

14.01-3L Forestry and timber production

C---

Strategies

Encourage environmentally sustainable timber production.

Encourage timber processing and value-adding industries to expand and support the timber industry.

Encourage expansion of plantation forestry opportunities including within the proposed Strzelecki-Alpine Biolink.

Avoid non-agricultural uses from locating or developing in a manner that will inhibit the expansion or operation of forestry uses.

Ensure timber production complements the orderly development of the coal resource.

Ensure timber production does not increase the level of bushfire risk on surrounding sensitive land uses.
