

Road Reseal Works

As part of Council's commitment to providing high quality infrastructure, we allocate a substantial amount of funds for road resurfacing every year. **Your road has been selected as part of this year's program.**

We have already prepared the roads on the program for resealing. Works you may have already seen include:

- replacing damaged kerb and channel and drainage pits
- repairing failed or failing areas of road pavement
- addressing the shape of the road to ensure water runs off the pavement surface

What happens next?

- bitumen is sprayed on the road to form the thin waterproof membrane
- it is covered with a thin layer of aggregate
- the aggregate is rolled into the bitumen to protect the bitumen and form a skid resistant surface

When will the works happen?

We will reseal your road during the warmer months. Works generally start in October and are completed by March. You will receive a notification shortly before the works are to be completed on your road.

① Tanker applying spray seal

② Tip truck spreading aggregate

③ Multi wheeled roller used to embed the aggregate
